

IBS and the Spoon Theory

by NEWLIFEOUTLOOK TEAM

Understanding the Spoon Theory

When you have a chronic illness like irritable bowel syndrome (IBS), you get used to explaining yourself and your condition. The sad truth, however, is that often people still don't understand you and doubt your pain.

For lupus sufferer Christine Miserandino, it was trying to explain her condition to her friend that drove her to think up the explanation now used by chronic illness sufferers everywhere: the spoon theory.

She took a handful of spoons and explained that each activity she completes in a day "costs" a certain number of spoons. When the spoons are gone, she has no more energy left for that day.

A typical "healthy" person has a high or unlimited amount of spoons and doesn't have to ration them to get through the day. But those with chronic illness must consider their days and activities carefully so they don't burn out before the day is over.

what is Spoon Theory?

The Spoon Theory was created as a way for people with chronic illness to explain their experience to others.

HOW IT WORKS

When you have a chronic illness, you have a **limited number of spoons** for each day — and each task you complete **costs a certain number of spoons**.

Once your spoons are gone, they're gone.

Say you have **10 tasks** to accomplish in a day — like showering, getting dressed, going to work, etc. — and only **10 spoons for that day**.

Some tasks may require more than one spoon, so some things won't get done. You could dip into your spoons for the next day, but then you'll have even fewer spoons tomorrow.

“The difference in being sick and being healthy is having to make choices... the rest of the world doesn't have to.”

- Christine Miserandino, spoon theory creator.
